Valid Project Chartfield Combinations

**Description:**

- Returns chartfield combinations valid for use with the specified Project at a specific point in time (this report will show changes to applicable the Project attributes, displaying any upcoming (future), current and historical valid chartfield combinations).
- Includes other Project specific attributes and a link to the web Project Lookup (which displays current attributes only).

**Use:**

- Inputs--required fields denoted by an asterisk (*):
  - *Project
- Note--two versions of this report are available, (FS) and (HR), solely for the purpose of making the report available to both Financial and HR users. Both reports return the same results.

**Security Authorization:**

- Access is restricted to users with any Financial or HRIL security authorization.
- Reports in the Financial/HR Information Library SECURITY folder generate lists of users security authorization.
- To request access, use the Financial Web Management Reports Security Authorization or HR Web Applications Security Authorization form (as appropriate). Various levels of Financial access can be requested. To understand how to request the appropriate financial security, please refer to the Financial Security Overview and Instructions before completing the form.
