Call for submissions – Research Reproducibility Conference

The Research Reproducibility Conference will bring together researchers, students, and administrators for a frank discussion on how institutions can support research reproducibility and make more research true. We hope to further the dialogue around open science, open data, transparency, and good research practices. The conference will be held November 14-15, 2016 at The University of Utah S. J. Quinney College of Law.

Submit your proposal for the Poster Session, which can consist of completed or in-progress projects that reflect the pursuit of making research true.

Suggested topics can include, but are not limited to:

- Case study of large-scale collaborative research
- Adoption of replication culture and its impact
- Research illustrating a lack of reproducible research in your field
- Registration of studies, protocols, analysis codes, datasets, raw data, and results
- Examples of use or sharing of data, protocols, materials, software, and other tools
- Reproducibility practices
- More appropriate statistical methods
- Work in standardization of definitions and analyses
- Improvement of study design standards
- Improvements in peer review, reporting, and dissemination of research
- Better training of scientific workforce in methods and statistical literacy

Presenting a poster is a great opportunity, especially for students and new researchers, to obtain interesting and valuable feedback on ongoing research from conference attendees. We strongly encourage student and industry submissions. A Best Poster Award will be presented based on the quality of research work, poster design, and oral presentation.

Deadline to submit posters is July 31st, 2016.
