NSF GOALI PROGRAM

The GOALI program is focused on allowing opportunities for:
- Interdisciplinary university-industry teams to conduct collaborative research projects, in which the industry research participant provides critical research expertise, without which the likelihood for success of the project would be diminished;
- Faculty, postdoctoral fellows, and students to conduct research and gain experience in an industrial setting; and
- Industrial scientists and engineers to bring industry's perspective and integrative skills to academia.

GOALI proposals should focus on research that addresses shared interests by academic researchers and industrial partners. The proposed research should be transformative, beneficial to industry, and include the collaboration between academic and industrial partners. The proposals should advance scientific and engineering foundations to enable future breakthrough technologies with the potential to address critical industry needs.

Prior to submitting a GOALI proposal or request GOALI supplemental funding a proposer must contact the cognizant NSF Program Officer listed in the relevant funding opportunity.

*NSF funds are not permitted to be used to support the industrial research partner. The industrial participant cannot use or receive any NSF funds.*

More information on GOALI can be found on the PAPPG NSF website.
